

FRATELLI DAMIAN

Below the surface

THE ART OF METALWORKING

In the products we make, craft know-how matches the most innovative techniques of metal surface processing. The results are unique personalized products that meet many construction and finishing requirements for materials such as stainless steel, brass, copper, aluminium alloys, and carbon steel.

HISTORY

The history of Fratelli Damian dates back to the 1970s.

It stems from the skilled craft work and passion of an expert in working metal surfaces, Luigi Damian, who developed the business until the late 1990s, when he passed the baton to his son Loris and daughter Marzia to create Fratelli Damian.

The story is one of foresight and vision, in which the know-how of artisans is handed down and enhanced over the years, while remaining the beating heart of a new company.

That significant journey has made Fratelli Damian the highly respected company it is today in the processing and transformation of precious materials for many design and construction fields.

SCOPE OF WORK

The wealth of experience added to over the years by new skills, technologies and a drive for innovation allow the company to easily interact with architects and designers from many sectors of the world of luxury. In particular, Fratelli Damian specializes in supplying products for the retail, contract and naval sectors.

BELOW THE SURFACE

Don't stop at appearances. Keep a transverse vision.

For us, this means “going below the surface”.

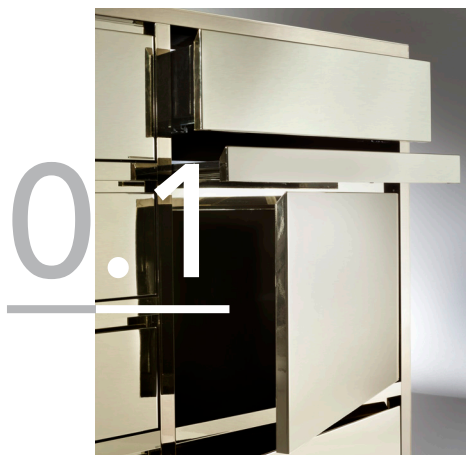

It is an approach which guides our choices daily, encouraging us to tread the paths of innovation and research, and which positively stimulates our problem-solving abilities.

We are specialized in metal surface processing but we offer a lot more: the sum of skills, and of logical and creative resources for finding the right solutions to reach the best results.

OUR MACHINING OPERATIONS

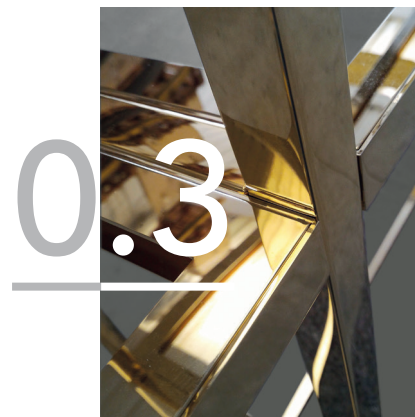

Our strength lies in combining artisan skills, high quality standards and advanced technical knowledge to meet even the most demanding demands from the luxury sector. We have also built up a network of reliable partners and collaborators in the area which allows us to complete and add to the services and products we offer. The company is divided into offices and workshop bays, specialized in different production phases and finishes.

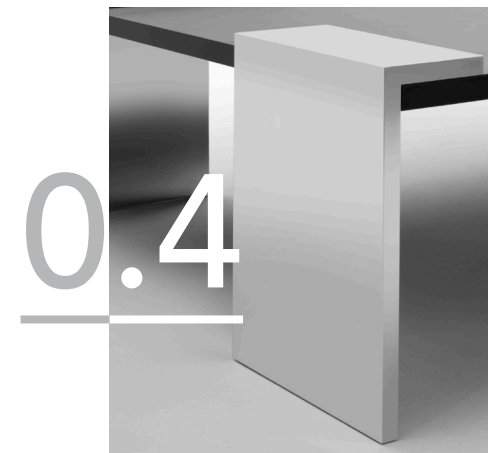

0.1
TECHNICAL SECTION
design, prototyping and problem-solving

0.2
CONSTRUCTION BAY
cutting, welding, drilling

0.3
FINISHING BAY
cleaning, satining, polishing

0.4
SPECIAL WORKS BAY
folding on stainless steel, aluminum, brass, and carbon steel

0.5
ASSEMBLY BAY
assembly and gluing of components
