Predazzo (Italy), 19th March 2018 The **new Fiemme Store Milano**, the only Italian flagship store of the **biocompatible wood flooring, covering and furniture manufacturing enterprise** will be inaugurated at **Milan Design Week 2018**.

Three hundred square metres of pure **indoor wellness**. As the Alpha-pinene project by **CNR-Ivalsa** – the top Institute of Research in the Trees and Timber sector – has recently proved, **Fiemme 3000 products do not contain harmful substances** and they even **release healthy VOC – Volatile Organic Compounds**.

The showroom is arranged on two floors in a courtyard building. The project, by **LDA - Luca Donazzolo architect studio**, brings out and wood and each space inside the new showroom. The entrance looks like a hotel hall to let **the healthy "made in Fiemme" wood embrace the visitors**. The basement – a space with exposed-brick barrel vaults – houses all Fiemme 3000 products. By following a flowing route, the visitor can move as if he were in a real dwelling, from one room to the next one.

To **highlight the total naturalness of wood**, all the interiors are made of **Reale** from **Boschi di Fiemme** collection: oak as created by nature, in its warm dove-grey colour mastered by the translucent and almost imperceptible veil of the transparent oiling.

«After opening in **China** and in **New York**, currently this is the only Fiemme Store in our distribution system and Milan was the perfect city to house it, because there the design is an excellence. It will not be a space dedicated to the house – explained **Marco Felicetti, CEO of Fiemme 3000** –. Our objective, particularly for our **25th anniversary**, is to make it a **Lab, a city point of reference for the world of wellness**, a shared group of activities to “feel good” as way of living, not only as way of furnishing your home».

Special inauguration during **Brera Design Week** with the set-up **“Healthy living: the future of interiors”** from **17th to 22nd April 2018**.
